ONIX DOI METADATA FOR MONOGRAPH CHAPTERS

This document specifies an ONIX subset with a number of newly-defined elements intended to provide a communication format for metadata related to the registration of DOIs for chapters from monographs. The specification allows for the registration of a DOI that is assigned to a monograph-chapter-as-work or a DOI that is assigned to a monograph-chapter-as-manifestation, i.e., it gives the option of registering one DOI only, regardless of the different forms — paper or electronic — in which the chapter appears, or of registering separate DOIs for each form.

The specification allows for the registration of both single resolution DOIs and multiple resolution DOIs. A new composite has been added to specify multiple pointers (URI) to the online resources associated with the DOI to which the metadata package refers.

The document also includes a message header and a pair of “start of message” and “end of message” elements. Please see ONIX for Books – Product Information Message – XML Message Specification for details of other ONIX XML conventions.

An ONIX Monograph Chapter DOI Registration message must carry either Monograph Chapter Work records only or Monograph Chapter Manifestation records only. Different message names are used in each case.

Throughout the document, text in dark red is used to indicate content that applies only to monograph-chapters-as-works; text in blue-green is used to indicate content that applies only to monograph-chapters-as-manifestations; text in light red indicates areas where there are outstanding queries or uncertainties.

Pages 31 and 32 show a simple example of an ONIX Monograph Chapter DOI Registration message carrying a single Monograph Chapter Work record.

This ONIX format was developed in association with the mEDRA Project, supported in its initial stages by the eContent programme of the European Union, and has been extended to meet additional requirements specified by Nielsen BookData, OPOCE (The Office for Official Publications of the European Communities) and MVB (Marketing- und Verlagsservice des Buchhandels GmbH).
<ONIXDOI:MonographChapterWorkRegistrationMessage>

An ONIX DOI registration metadata message for monograph-chapters-as-works is an XML document beginning with the label <ONIXDOI:MonographChapterWorkRegistrationMessage xmlns="http://www.editeur.org/onix/DOIMetadata/2.0"> (which includes an XML namespace declaration) and ending with the label </ONIXDOI:MonographChapterWorkRegistrationMessage>. The content of the message comprises one mandatory instance of the <Header> composite defined below, and one or more instances of the <DOI:MonographChapterWork> record.

<ONIXDOI:MonographChapterVersionRegistrationMessage>

An ONIX DOI registration metadata message for monograph-chapters-as-manifestations is an XML document beginning with the label <ONIXDOI:MonographChapterVersionRegistrationMessage xmlns="http://www.editeur.org/onix/DOIMetadata/2.0"> (which includes an XML namespace declaration) and ending with the label </ONIXDOI:MonographChapterVersionRegistrationMessage>. The content of the message comprises one mandatory instance of the <Header> composite defined below, and one or more instances of the <DOI:MonographChapterVersion> record.

Header composite

A group of data elements which together constitute a message header.

Reference name  <Header>

MMH.1  Sender company name

The name of the sender organization, which should always be stated in a standard form agreed with the addressee. Mandatory and non-repeating.

Format  Variable-length ASCII text, suggested maximum 30 characters
Reference name  <FromCompany>
Example  Mondadori

MMH.2  Sender contact

Free text giving the name, department, phone number, etc for a contact person in the sender organization who is responsible for the content of the message. Optional and non-repeating.

Format  Variable-length ASCII text, suggested maximum 300 characters
Reference name  <FromPerson>
Example  Jackie Brown, 020 7979 6444

MMH.3  Sender contact email address

A text field giving the email address for a contact person in the sender organization who is responsible for the content of the message. Mandatory and non-repeating.

Format  Variable-length ASCII text, suggested maximum 100 characters
Reference name  <FromEmail>
Example  jackie.brown@bigpublisher.co.uk
### MMH.4 Addressee company name

The name of the addressee organization, which should always be stated in a standard form agreed with the addressee. Mandatory and non-repeating.

**Format**: Variable-length ASCII text, suggested maximum 30 characters  
**Reference name**: `<ToCompany>`  
**Example**: mEDRA

### MMH.5 Message sequence number

A sequence number of the messages in a series sent between trading partners, to enable the receiver to check against gaps and duplicates. Optional and non-repeating.

**Format**: Variable-length integer  
**Reference name**: `<MessageNumber>`  
**Example**: 1234

### MMH.6 Message repeat number

A number which distinguishes any repeat transmissions of a message. The original is numbered 1, and repeats are numbered 2, 3 etc. Optional and non-repeating.

**Format**: Variable-length integer  
**Reference name**: `<MessageRepeat>`  
**Example**: 2

### MMH.7 Message creation date/time

The date on which the message is sent. Optionally, the time may be added, using the 24-hour clock. Mandatory and non-repeating.

**Format**: Eight or twelve numeric digits only (YYYYMMDD or YYYYMMDDHHMM)  
**Reference name**: `<SentDate>`  
**Example**: 200005220230

### MMH.8 Message note

Free text giving additional information about the message. Optional and non-repeating.

**Format**: Variable-length ASCII text, suggested maximum 500 characters  
**Reference name**: `<MessageNote>`  
**Example**: New titles to be published September 2003

**End of header composite**
<DOIMonographChapterWork> record

A monograph-chapter-as-work is described by a group of data elements beginning with an XML label <DOIMonographChapterWork> and ending with an XML label </DOIMonographChapterWork>.

Reference name <DOIMonographChapterWork>

<DOIMonographChapterVersion> record

A monograph-chapter-as-manifestation is described by a group of data elements beginning with an XML label <DOIMonographChapterVersion> and ending with an XML label </DOIMonographChapterVersion>.

Reference name <DOIMonographChapterVersion>

MMC.1 Notification or update type code

An ONIX code which indicates the type of notification or update which is being sent. Mandatory and non-repeating.

Format Fixed-length, two numeric digits.

Code list

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>06</td>
<td>New: a new registration request</td>
</tr>
<tr>
<td>07</td>
<td>Update: a complete replacement for a record previously sent</td>
</tr>
</tbody>
</table>

Reference name <NotificationType>

Example 06

MMC.2 DOI

Format Variable-length text, suggested maximum length 300 characters.

Reference name <DOI>

Example 10.1006/jmbi.1998.2354

MMC.3 DOI website link

The URL for the primary website to which the DOI will resolve. Mandatory and non-repeating.

Format Variable-length text, suggested maximum length 300 characters

Reference name <DOIWebsiteLink>

Example http://xyzbooks.com/0123456789/c123.htm
Collection composite

An optional and repeatable group of data elements which together identify and provide pointers to other web pages associated with the DOI to which the metadata package refers. It is envisaged that the composite will be used to give the URLs associated with particular service types such as crawling for antiplagiarism check.

The `<Collection>` element must carry the mandatory attribute `property`. For the antiplagiarism service, the attribute `property` must have the following value: `crawler-based`.

Reference name `<Collection>`
Example `<Collection property="crawler-based">`

Item

A group of data elements which includes the resource associated with the DOI to which the metadata package refers. Mandatory and non-repeating.

The `<Item>` element can carry the optional attribute `crawler`. The attribute `crawler` can have one of the following values: `altavista`, `google`, `msn`, `scirus`, `yahoo`, `iParadigms`. For the the antiplagiarism service, the attribute `crawler` must have the following value: `iParadigms`.

Reference name `<Item>`
Example `<Item crawler="iParadigms">`

Resource

An element which identifies the pointer to other web pages associated with the DOI, used to provide the URL suitable to enable particular service types such as crawling for antiplagiarism check. Mandatory and non-repeating.

Format URI, max length 2048 digits
Reference name `<Resource>`

DOI resolution composite

A group of data elements which together identify and provide pointers (URI) to multiple online resources associated with the DOI, thus enabling the DOI Multiple Resolution service.

The composite is optional, but must be included whenever multiple URI are intended to be associated with the DOI to which the metadata package refers. Non-repeating.

Please refer to DOI Multiple Resolution Metadata separate documentation for details on the use of this composite (doi: 10.1392/ONIX_DOI_MR)

Reference name `<DOIResolution>`

End of DOI resolution composite
Website composite

An optional and repeatable group of data elements which together identify and provide pointers to other webpages associated with the DOI to which the metadata package refers. It is envisaged that the composite will be used to give the URLs associated with particular service types for multiple resolution. **Note that for Multiple Resolution purposes the <Website> composite has been superseded by the new composite <DOIResolution>, and the code list will not be further developed. The <Website> composite is retained only for purposes of backwards compatibility, and its use is now to be deprecated.**

Reference name  <Website>

MMC.4 Website purpose

An ONIX code which identifies the role or purpose of the website which is linked through the <WebsiteLink> element. Mandatory and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 300 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>Code values to be defined to cover multiple resolution for different service types</td>
</tr>
<tr>
<td>Reference name</td>
<td>&lt;WebsiteRole&gt;</td>
</tr>
</tbody>
</table>

Example

http://xyzbooks.com/0123456789/c123/service3.htm

End of website composite

MMC.6 DOI structural type

An IDF value identifying the structural type of the entity to which the DOI in this metadata package is registered. Optional and non-repeating. This element is specified to be optional as it will not necessarily be required in metadata submitted for registration. Instead, it may be generated by the DOI registration agency by mapping from other content.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length character string values defined by IDF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>The only permitted value for DOI registrations for monograph-chapters-as-works is Abstraction</td>
</tr>
<tr>
<td></td>
<td>The permitted values for DOI registrations for monograph-chapters-as-manifestations are PhysicalFixation, DigitalFixation</td>
</tr>
<tr>
<td>Reference name</td>
<td>&lt;DOI StructuralType&gt;</td>
</tr>
</tbody>
</table>

Example

Abstraction
MMC.7 DOI mode

An IDF value identifying the mode of the entity to which the DOI in this metadata package is registered. Optional and non-repeating. This element is specified to be optional as it will not necessarily be required in metadata submitted for registration. Instead, it may be generated by the DOI registration agency by mapping from other content.

- **Format**: Variable-length character string values defined by IDF
- **Code list**: The only permitted value for DOI registrations for monograph-chapters-as-works is Abstract
  - The permitted values for DOI registrations for monograph-chapters-as-manifestations are Visual, Audio, Audiovisual

  - **Reference name**: <DOIMode>
  - **Example**: Visual

MMC.8 DOI registrant name

The name of the person or corporate body responsible for registering the DOI to which this ONIX metadata package refers. Mandatory and non-repeating.

- **Format**: Variable-length text, suggested maximum length 100 characters
- **Reference name**: <RegistrantName>
- **Example**: Mondadori

MMC.9 DOI registration authority

An IDF value identifying the registration agency with which the DOI in this ONIX metadata package is registered. Optional and non-repeating. This element is specified to be optional as it will NOT be required in metadata submitted by publishers for registration.

- **Format**: Variable-length controlled character string values
- **Code list**: Values so far defined are: mEDRA, NielsenBookData, OPOCE
- **Reference name**: <RegistrationAuthority>
- **Example**: mEDRA
NOTE: the `<WorkIdentifier>` and `<ProductIdentifier>` composites specified on this and the following page are to be used for additional identifiers by which the monograph chapter which is being registered for DOI assignment is known. They are included for consistency with other ONIX DOI formats, though it is probably less likely that a monograph chapter will carry other formal identifiers.

**Work identifier composite**

A group of data elements which together define the identifier of a work in accordance with a specified scheme, and used here for any additional identifiers for a monograph-chapter-as-work. In ONIX DOI registrations for monograph-chapters-as-works, one occurrence might carry the ISTC assigned to the work, if known. Optional and repeatable if the work has more than one identifier of different types. Not used in a record for a monograph-chapter-as-manifestation.

- **Reference name** `<WorkIdentifier>`

**MMC.10 Work identifier type code**

An ONIX code identifying the scheme from which the identifier in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<WorkIdentifier>` composite, and non-repeating.

- **Format** Fixed-length, 2 numeric digits
- **Code list**
  - 01 Proprietary, eg a publisher’s internal work identifier
  - 11 ISTC
- **Reference name** `<WorkIDType>`
- **Example** 11

**MMC.11 Identifier value**

An identifier of the type specified in the `<WorkIDType>` element. Mandatory in each occurrence of the `<WorkIdentifier>` composite, and non-repeating.

- **Format** According to the identifier type specified in `<WorkIDType>`
- **Reference name** `<IDValue>`
- **Example** 12345678

**End of work identifier composite**
See note on previous page.

**Product identifier composite**

A repeatable group of data elements which together define the identifier of a product in accordance with a specified scheme, and used here for any additional identifiers for a monograph-chapter-as-manifestation. In ONIX DOI registrations for monograph-chapters-as-manifestations, one occurrence could carry a publisher’s proprietary identifier, for example. Optional, and repeatable if the item has more than one identifier of different types. Not used in a record for a monograph-chapter-as-work.

Reference name  
<ProductIdentifier>

**MMC.12 Product identifier type code**

An ONIX code identifying the scheme from which the identifier in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<ProductIdentifier>` composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, 2 numeric digits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>01 Proprietary, eg a publisher’s product number</td>
</tr>
<tr>
<td>Code list</td>
<td>02 ISBN-10 (sent unhyphenated in ONIX records)</td>
</tr>
<tr>
<td>Code list</td>
<td>03 EAN-13 (without hyphens)</td>
</tr>
<tr>
<td>Code list</td>
<td>15 ISBN-13 (without hyphens)</td>
</tr>
</tbody>
</table>

Reference name  
<ProductIDType>

Example  
02 ISBN-10

**MMC.13 Identifier value**

An identifier of the type specified in the `<ProductIDType>` element. Mandatory in each occurrence of the `<ProductIdentifier>` composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>According to the identifier type specified in <code>&lt;ProductIDType&gt;</code></th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;IDValue&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>12345678</td>
</tr>
</tbody>
</table>

**End of product identifier composite**
**Monographic publication composite**

A group of data elements which together identify and describe a monographic publication at either or both of “monographic work” and “monographic product” (or “manifestation”) levels. Mandatory and non-repeating. Used to specify the complete work or product of which the chapter is part.

Reference name  
<MonographicPublication>

**Monographic work composite**

A group of data elements which together identify and describe a monographic work. Mandatory and non-repeating.

Reference name  
<MonographicWork>

**Work identifier composite**

A repeatable group of data elements which together define an identifier of a monographic work. Optional: to be sent only if the monograph has an established identifier at “work” level. (ISBNs are assigned at “monographic product” level.) Repeatable only if two or more identifiers of different types are sent.

Reference name  
<WorkIdentifier>

**MMC.14 Work identifier type code**

An ONIX code identifying the scheme from which the identifier in <IDValue> is taken. Mandatory in each occurrence of the <WorkIdentifier> composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, 2 numeric digits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>01  Proprietary, a publisher’s or agent’s internal number</td>
</tr>
<tr>
<td></td>
<td>06  DOI</td>
</tr>
<tr>
<td></td>
<td>11  ISTC</td>
</tr>
</tbody>
</table>

Reference name  
<WorkIDType>

Example  
01  Proprietary

**MMC.15 Identifier value**

An identifier of the type specified in <WorkIDType>. Mandatory in each occurrence of the <WorkIdentifier> composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>According to the identifier type specified in &lt;WorkIDType&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td>&lt;IDValue&gt;</td>
</tr>
<tr>
<td>Example</td>
<td>12345678</td>
</tr>
</tbody>
</table>

**End of work identifier composite**
Title composite

A group of data elements which together give the text of a title, including a subtitle where applicable, and specify its type; used here for the title of a monographic work. Mandatory in each occurrence of the `<MonographicPublication>` composite. Repeatable if two or more forms of the same title are sent.

The `<Title>` tag may optionally carry any of the following ONIX attributes: `textformat`, `language`, `transliteration`, `textcase`, where these are shared by all text elements within the composite.

Reference name `<Title>`

MMC.16 Title type code

An ONIX code indicating the type of a title. Mandatory in each occurrence of the `<Title>` composite, and non-repeating. Additional types of title can be defined by adding code values.

Format Fixed-length, two numeric digits

Code list

01 Distinctive title: use for the work title in full
05 Abbreviated or truncated title

Reference name `<TitleType>`

Example 01

MMC.17 Title text

The text of the title specified by the `<TitleType>` code. Mandatory in each occurrence of the `<Title>` composite, and non-repeating.

Format Variable-length text, suggested maximum 600 characters

Reference name `<TitleText>`

Example This blessed plot

MMC.18 Subtitle

The full text of a subtitle, if any. “Subtitle” means any added words which appear with the title given in an occurrence of the `<Title>` composite, and which amplify and explain the title, but which are not considered to be part of the title itself. Optional and non-repeating.

Format Variable-length text, suggested maximum 300 characters

Reference name `<Subtitle>`

Example Britain and Europe from Churchill to Blair

End of title composite

End of monographic work composite
Monographic product composite

A group of data elements which together identify and specify the form of a product or “manifestation” of a monographic publication. Each occurrence of the composite must consist of either one or more identifiers for the monographic product and a product form code or a product form code alone, if there is no unique identifier available for the specified product.

Optional and repeatable in records describing a monographic chapter-as-work, if the monographic publication is available in two or more forms.

Mandatory and non-repeating in records describing a monographic chapter-as-manifestation: only the form to which the DOI registration applies should be cited. A cross-reference to any other form(s) can be sent in the <RelatedProduct> composite.

Reference name <MonographicProduct>

Product identifier composite

A group of data elements which together define an identifier of a monographic product. Optional and repeatable: to be sent if the monograph has one or more established identifiers at product level.

Reference name <ProductIdentifier>

MMC.19 Product identifier type code

An ONIX code identifying the scheme from which the identifier in <IDValue> is taken. Mandatory in each occurrence of the <ProductIdentifier> composite, and non-repeating.

Format Fixed-length, 2 numeric digits

<table>
<thead>
<tr>
<th>Code list</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>Proprietary, a publisher’s or agent’s internal number</td>
</tr>
<tr>
<td>02</td>
<td>ISBN-10 (sent unhyphenated in ONIX records)</td>
</tr>
<tr>
<td>03</td>
<td>EAN-13</td>
</tr>
<tr>
<td>06</td>
<td>DOI</td>
</tr>
<tr>
<td>15</td>
<td>ISBN-13 (unhyphenated)</td>
</tr>
</tbody>
</table>

Reference name <ProductIDType>

Example 02 ISBN-10

MMC.20 Identifier value

An identifier of the type specified in <ProductIDType>. Mandatory in each occurrence of the <ProductIdentifier> composite, and non-repeating.

Format According to the identifier type specified in <ProductIDType>

Reference name <IDValue>

Example 12345678

End of product identifier composite
### MMC.21 Product form code

An ONIX code which indicates the medium and/or format in which a monographic item is published. Mandatory in each occurrence of the `<MonographicProduct>` composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, two letters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>ONIX List 7: see separate documentation</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;ProductForm&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>BB</code> Hardback book</td>
</tr>
</tbody>
</table>

### MMC.22 Epublication format code

An ONIX code identifying the file format of an epublication. Optional and non-repeating, and can occur only if the `<ProductForm>` code is `DG` or `DH`.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, 2 numeric digits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>ONIX List 11: see separate documentation</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;EpubFormat&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>02</code></td>
</tr>
</tbody>
</table>

### MMC.23 Epublication format version number

A version number which applies to an epublication format. Optional and non-repeating, and can occur only if the `<EpubFormat>` field is present.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum 10 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;EpubFormatVersion&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>2.1</code></td>
</tr>
</tbody>
</table>

### MMC.24 Epublication format description

A free text description of an epublication format. Optional and non-repeating, and can occur only if the `<ProductForm>` code is `DG` or `DH`, but does not require the `<EpubFormat>` field to be present.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum 200 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;EpubFormatDescription&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>Screen optimized PDF, with low-res figures</code></td>
</tr>
</tbody>
</table>

### MMC.25 Imprint or brand name

The full name of the imprint or brand under which the product is issued, as it appears on the title page of a book or in a corresponding position on a non-book product. Optional and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable length text, suggested maximum length 100 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;ImprintName&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td><code>Secker &amp; Warburg</code></td>
</tr>
</tbody>
</table>
Publisher composite

A repeatable group of data elements which together identify an entity which is associated with the publishing of a product. Optional and repeatable. Each occurrence of the composite must carry a publishing role code and a publisher name.

Reference name <Publisher>

MMC.26 Publishing role code

An ONIX code which identifies a role played by an entity in the publishing of a product. Mandatory in each occurrence of the <Publisher> composite, and non-repeating.

Format Fixed-length, two numeric digits.

Code list
- 01 Publisher
- 02 Co-publisher

Reference name <PublishingRole>

Example 02

Publisher identifier composite

A group of data elements which together define the identifier of a publisher name. Optional and repeatable, but mandatory if the <Publisher> composite does not carry a <PublisherName>. 

Reference name <PublisherIdentifier>

Publisher identifier type

An ONIX code which identifies the scheme from which the value in the <IDValue> element is taken. Mandatory in each occurrence of the <PublisherIdentifier> composite, and not repeatable.

Format Fixed-length, two numeric digits

Code list
- 01 Proprietary
- 16 ISNI

Reference name <PublisherIDType>

Example 16 ISNI

Identifier type name

A name which identifies a proprietary identifier scheme (ie a scheme which is not a standard and for which there is no individual ID type code). Must be included when, and only when, the code in the <PublisherIDType> element indicates a proprietary scheme. Optional and not repeatable.

Format variable-length text, suggested maximum length 50 characters

Reference name <IDTypeName>

Example proprietary identifier scheme of the publishing company

Identifier value

A code value taken from the scheme specified in the <PublisherIDType> element. Mandatory in each occurrence of the composite, and not repeatable.

Format determined by the scheme specified in <PublisherIDType>

Reference name <IDValue>

Example 0000000068287141
End of publisher identifier composite

**MMC.27 Publisher name**
The name of an entity associated with the publishing of a product. Mandatory in each occurrence of the `<Publisher>` composite, and non-repeating.

- **Format**: Variable length text, suggested maximum length 100 characters.
- **Reference name**: `<PublisherName>`
- **Example**: Reed International Books

End of publisher composite

**MMC.28 Country of publication**
A code identifying the country where the product is published. Mandatory and non-repeating.

- **Format**: Fixed-length, two upper-case letters. Note that ISO 3166 specifies that these codes should always be in upper-case.
- **Code list**: ISO 3166-1 two-letter codes
- **Reference name**: Onix List 91 (ISO 3166-1 two-letter codes) : see separate documentation
- **Example**: US

End of monographic product composite

End of monographic publication composite
Content item composite

A group of data elements which together describe a content item, used here for a monograph chapter. One and only one occurrence is mandatory in each ONIX DOI Monograph Chapter record. The two elements <SequenceNumber> and <LevelSequenceNumber> offer alternative ways of stating the position occupied by a content item within a monograph in a normalised way, i.e. using only numeric integers. The <ContentItemEnumeration> composite, on page 15, allows the enumeration of a content item within a monograph to be stated in the style and language used in the original work.

Reference name <ContentItem>

MMC.29 Content item sequence number

A number which specifies the position of a content item in a “flat” sequence within the monograph of which it forms part. Optional and non-repeating. See note at top of page.

Format Variable-length integer, 1, 2, 3 etc, suggested maximum length 3 digits

Reference name <SequenceNumber>

Example 3

MMC.30 Level sequence number

A number which specifies the position of a content item in a multi-level hierarchy of such items. Numbering starts at the top level in the hierarchy, which may represent (e.g.) chapters in a printed book, and the first item at the top level is numbered 1. Numbers should be assigned solely with a view to the logic of the ONIX description and not in relation to any other characteristics of the items being numbered (such as their typographical layout in a printed table of contents). Optional and non-repeating. See note at top of page.

Format Variable-length string of integers, each successive integer being separated by a full stop, suggested maximum length 100 characters

Reference name <LevelSequenceNumber>

Example 2.24.1.7
Text item composite
A group of data elements which are specific to text content. Optional and non-repeating.
Reference name  <TextItem>

MMC.31  Text item type code
An ONIX code which identifies the nature of a text item. Optional, and non-repeating.
Format  Fixed length, 2 numeric digits
Code list  
01  Textual work: a complete work which is published as a content item in a product which carries two or more such works, eg when two or three novels are published in a single omnibus volume
02  Front matter: text components such as Preface, Introduction etc which appear as preliminaries to the main body of text
03  Body text: text components such as Part, Chapter, Section etc which appear as part of the main body of text
04  Back matter: text components such as Index which appear after the main body of text
Reference name  <TextItemType>
Example  03  Body text

Page run composite
A group of data elements that together define a run of contiguous pages on which a text item appears. The composite is used only in a record for a monograph-chapter-as-manifestation. Optional, and may be repeated where the text item covers two or more separate page runs.
Reference name  <PageRun>

MMC.32  First page number
The number of the first page of a sequence of contiguous pages. Mandatory in each occurrence of the <PageRun> composite, and non-repeating. Note that here and in the <LastPageNumber> element a page “number” may be arabic, roman, or an alphanumeric string (eg L123).
Format  Variable-length alphanumeric, suggested maximum length 20 characters
Reference name  <FirstPageNumber>
Example  23

MMC.33  Last page number
The number of the last page of a sequence of contiguous pages (ignoring any blank verso which is left after the last text page). This element is omitted if an item begins and ends on the same page; otherwise it should occur once and only once in each occurrence of the <PageRun> composite.
Format  Variable-length alphanumeric, suggested maximum length 20 characters
Reference name  <LastPageNumber>
Example  35

End of page run composite
**MMC.34 Number of pages**
The page extent of a text item within a paginated product. Optional and non-repeating: used only in a record for a monograph-chapter-as-manifestation.

- **Format**: Variable length integer, suggested maximum length 6 digits.
- **Reference name**: <NumberOfPages>
- **Example**: 26

**End of text item composite**

**Extent composite**
A repeatable group of data elements which together describe an extent pertaining to the product.

- **Reference name**: <Extent>

**MMC.35 Extent type code**
An ONIX code which identifies the type of extent carried in the composite, eg file size for a digital product. Mandatory in each occurrence of the <Extent> composite, and non-repeating.

- **Format**: Fixed-length, two numeric digits.
- **Code list**: ONIX List 23: see separate documentation
- **Reference name**: <ExtentType>
- **Example**: 22 File size

**MMC.36 Extent value**
The numeric value of the extent specified in <ExtentType>. Mandatory in each occurrence of the <Extent> composite, and non-repeating.

- **Format**: Numeric, with decimal point where required, as appropriate to the extent type specified in field MMC.35
- **Reference name**: <ExtentValue>
- **Example**: 2.5

**MMC.37 Extent unit**
An ONIX code indicating the unit used for the <ExtentValue> and the format in which the value is presented. Mandatory in each occurrence of the <Extent> composite, and non-repeating.

- **Format**: Fixed-length, two numeric digits
- **Code list**: ONIX List 24: see separate documentation
- **Reference name**: <ExtentUnit>
- **Example**: 19 Megabytes

**End of extent composite**
Content item enumeration composite

A group of data elements which together allow the enumeration of a content item within a monograph to be stated in the style and wording used in the original work. The composite can be nested to any depth required to specify a multi-level enumeration, eg Part IV, Chapter 3, Section 1. See example on next page. Optional and non-repeating.

Reference name <ContentItemEnumeration>

MMC.38 Content item type name

The generic name (if any) which is given in the monographic work to the type of section which the content item represents, eg Chapter, Part, Track. Optional and non-repeating.

Format Variable-length alphanumeric, suggested maximum length 100 characters

Reference name <ContentTypeName>

Example Chapter

MMC.39 Content item number

The number (if any) which is given to the content item, in the form (eg Arabic or roman) in which it is given in the monographic work. Mandatory in any occurrence of the <ContentItemEnumeration> composite, and non-repeating.

Format Variable-length alphanumeric, suggested maximum length 20 characters

Reference name <ContentItemNumber>

Example XX

Content item enumeration composite

The <ContentItemEnumeration> composite can appear as a recursive element within itself. Optional, and non-repeating at any given level. See example on next page.

Reference name <ContentItemEnumeration>

End of content item enumeration composite
Title composite

A group of data elements which together give the text of a title, including a subtitle where applicable, and specify its type. The `<Title>` tag may optionally carry any of the following ONIX attributes: `textformat`, `language`, `transliteration`, `textcase`, where these are shared by all text elements within the composite. The `<Title>` composite is mandatory in each occurrence of the `<ContentItem>` composite, and is repeatable if more than one form of the title is sent.

Reference name  <Title>

MMC.40  Title type code

An ONIX code indicating the type of a title. Mandatory in each occurrence of the `<Title>` composite, and non-repeating. Additional types of title can be defined by adding code values.

Format  Fixed-length, two numeric digits

Code list  
01  Distinctive title, in full
05  Abbreviated or truncated title

Reference name  <TitleType>

Example  01

MMC.41  Title text

The text of the title specified by the `<TitleType>` code. Mandatory in each occurrence of the `<Title>` composite, and non-repeating.

Format  Variable-length text, suggested maximum 600 characters

Reference name  <TitleText>

Example  Getting to grips with the EU Copyright Directive

MMC.42  Subtitle

The full text of a subtitle, if any. “Subtitle” means any added words which appear with the title given in an occurrence of the `<Title>` composite, and which amplify and explain the title, but which are not considered to be part of the title itself. Optional and non-repeating.

Format  Variable-length text, suggested maximum 300 characters

Reference name  <Subtitle>

Example  A lawyer’s view

End of title composite
Contributor composite

A repeatable group of data elements which together describe a personal or corporate contributor to the product.

Each instance of the `<Contributor>` composite must carry at least:

(a) one or more forms of representation of the person name
   or:
(b) a `<CorporateName>` element
   or:
(c) an `<UnnamedPersons>` element

But combinations of these elements are not permitted.

A new optional element `<NoContributor>` may be used to make a positive statement in an ONIX record that the item has no named authorship.

Reference name `<Contributor>`

MMC.43 Contributor sequence number

A number which specifies a single overall sequence of contributor names. Optional and non-repeating.

Format Variable-length integer, 1, 2, 3 etc, suggested maximum length 3 digits
Reference name `<SequenceNumber>`
Example 3

MMC.44 Contributor role

An ONIX code indicating the role played by a person or corporate body in the creation of the content item. Mandatory in each occurrence of a `<Contributor>` composite, and may be repeated if the same person or corporate body has more than one role in relation to the content item.

Format Fixed-length, one letter and two numeric digits
Code list ONIX List 17: see separate documentation
Reference name `<ContributorRole>`
Example A01

Name identifier composite

A group of data elements which together specify a name identifier, used here to carry an identifier for a person or organization name given in an occurrence of the `<Contributor>` composite. Optional and repeatable.

Reference name `<NameIdentifier>`

Name identifier type

An ONIX code which identifies the scheme from which the value in the `<IDValue>` element is taken. Mandatory in each occurrence of the `<NameIdentifier>` composite, and not repeatable.
Format: Fixed-length, two numeric digits

<table>
<thead>
<tr>
<th>Code list</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>Proprietary</td>
</tr>
<tr>
<td>16</td>
<td>ISNI</td>
</tr>
<tr>
<td>21</td>
<td>ORCID</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;NameIDType&gt;</td>
<td>21 ORCID</td>
</tr>
</tbody>
</table>

**Identifier type name**

A name which identifies a proprietary identifier scheme (i.e., a scheme which is not a standard and for which there is no individual ID type code). Must be included when, and only when, the code in the `<NameIDType>` element indicates a proprietary scheme. Optional and not repeatable.

Format: variable-length text, suggested maximum length 50 characters

<table>
<thead>
<tr>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;IDTypeName&gt;</td>
<td>proprietary identifier scheme of the publishing company</td>
</tr>
</tbody>
</table>

**Identifier value**

A code value taken from the scheme specified in the `<NameIDType>` element. Mandatory in each occurrence of the composite, and not repeatable.

Format: determined by the scheme specified in `<NameIDType>`

<table>
<thead>
<tr>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;IDValue&gt;</td>
<td><a href="http://orcid.org/0000-0001-6157-8808">http://orcid.org/0000-0001-6157-8808</a></td>
</tr>
</tbody>
</table>

**End of name identifier composite**

**MMC.45 Person name**

The name of a person who contributed to the creation of the content item, unstructured, and presented in normal order. Optional and non-repeating; see introductory text for the `<Contributor>` composite above for valid options.

Format: Variable-length text, suggested maximum length 100 characters

<table>
<thead>
<tr>
<th>Reference name</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;PersonName&gt;</td>
<td>James J. Johnson III</td>
</tr>
</tbody>
</table>
### MMC.46 Person name, inverted

The name of a person who contributed to the creation of the content item, presented in inverted order, with the element used for alphabetical sorting placed first. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 100 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;PersonNameInverted&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>Johnson, James J., III</td>
</tr>
</tbody>
</table>

### Names before key name

Name(s) and/or initial(s) preceding a person’s key name(s), eg James J.. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 100 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;NamesBeforeKey&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>James J.</td>
</tr>
</tbody>
</table>

### Key name(s)

Key name(s), ie the name elements normally used to open an entry in an alphabetical list, eg Smith or Garcia Marquez or Madonna or Francis de Sales (in Saint Francis de Sales). Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 100 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;KeyNames&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>Johnson</td>
</tr>
</tbody>
</table>

### Name Composite

A group of data elements which together represent a personal name, and specify its type. The `<Name>` composite may be used to send alternate names for the same person, eg. to handle such cases as Ian Rankin writing as Jack Harvey. Optional and not repeating.

| Reference name | `<Name>` |

### Person name type

An ONIX code indicating the type of the person name sent in an occurrence of the `<Name>` composite. Mandatory in each occurrence of the composite, and non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Fixed-length, two numeric digits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code list</td>
<td>ONIX List 18: see separate documentation</td>
</tr>
<tr>
<td>Reference name</td>
<td><code>&lt;PersonNameType&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>01 Pseudonym</td>
</tr>
</tbody>
</table>

### Other elements in the name composite

Within the `<Name>` composite, all the other forms of representation of the person name may be used in exactly the same way as specified on preceding pages.

### End of name composite
Professional affiliation composite
A repeatable group of data elements which together identify a contributor’s professional position and/or affiliation, allowing multiple positions and affiliations to be specified.
Reference name <ProfessionalAffiliation>

Professional position
A professional position held by a contributor to the product at the time of its creation. Optional and non-repeating.

Format Variable-length text, suggested maximum length 100 characters
Reference name <ProfessionalPosition>
Example Humboldt Professor of Oceanography

Affiliation
An organisation to which a contributor to the product was affiliated at the time of its creation, and – if the <ProfessionalPosition> element is also present – where s/he held that position. Optional and non-repeating.

Format Variable-length text, suggested maximum length 100 characters
Reference name <Affiliation>
Example Universidad de La Laguna

End of Professional affiliation composite
MMC.47 Corporate contributor name

The name of a corporate body which contributed to the creation of the content item, unstructured. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

**Format**
Variable-length text, suggested maximum length 200 characters

**Reference name**
<CorporateName>

**Example**
Good Housekeeping Institute

Biographical note

A biographical note about a contributor to the product. Optional and non-repeating. May occur with a person name or with a corporate name. A biographical note in ONIX should always contain the name of the person or body concerned, and it should always be presented as a piece of continuous text consisting of full sentences. Some recipients of ONIX data feeds will not accept text which has embedded URLs.

**Format**
Variable-length text, suggested maximum length 500 characters

**Reference name**
<BiographicalNote>

**Example**
Example Umberto Eco, professor of semiotics at the University of Bologna, and author of “The Name Of The Rose”

MMC.48 Unnamed person(s)

An ONIX code allowing a positive indication to be given when authorship is unknown or anonymous, or when as a matter of editorial policy only a limited number of contributors are named. Optional and non-repeating: see introductory text for the `<Contributor>` composite above for valid options.

**Format**
Fixed-length, two numeric digits

**Code list**
01 Unknown
02 Anonymous
03 et al (“and others”, when additional contributors are not listed)
04 Various authors (when the product combines a number of titles by different authors)

**Reference name**
<UnnamedPersons>

**Example**
02 Anonymous

End of contributor composite

No Authorship Indicator

An empty element that provides a positive indication that a product has no stated authorship. Intended to be used in an ONIX accreditation scheme to confirm that author information is being consistently supplied in publisher ONIX feeds. Optional and non-repeating. It should only be sent in a record that has no other occurrence of the `<Contributor>` composite.

**Format**
XML empty element

**Reference name**
<NoContributor/>

**Example**
<NoContributor/>
Language composite

A repeatable group of data elements which together represent a language and specify its role, used here to represent the language of a monograph chapter. Optional and repeatable.

Reference name: <Language>

MMC.49 Language role

An ONIX code indicating the “role” of a language in the context of the ONIX record. Mandatory in each occurrence of the <Language> composite, and non-repeating.

Format: Fixed-length, two numeric digits
Code list: ONIX List 22: see separate documentation
Reference name: <LanguageRole>
Example: 01

MMC.50 Language code

An ISO code indicating a language. Mandatory in each occurrence of the <Language> composite, and non-repeating.

Format: Fixed-length, three lower-case letters. Note that ISO 639 specifies that these codes should always be in lower-case.
Code list: ONIX List 74 (ISO 639-2/B three-letter codes): see separate documentation
Reference name: <LanguageCode>
Example: eng

End of language composite

Main subject composite

An optional and repeatable group of data elements which together describe a main subject classification or subject heading which is taken from a recognized scheme.

Reference name: <MainSubject>

MMC.51 Main subject scheme identifier

An ONIX code which identifies a subject scheme which is designated for use in a <MainSubject> composite. Mandatory in each occurrence of the composite, and non-repeating.

When the scheme in the code list is annotated “Code”, use the associated <SubjectCode> element to carry the value (if so required, the <SubjectHeadingText> element can be used simultaneously to carry the text equivalent of the code). When the scheme is annotated “Text”, use the <SubjectHeadingText> element to carry the text of the subject heading.

Format: Fixed-length, two numeric digits.
Code list: ONIX List 26
Reference name: <MainSubjectSchemaIdentifier>
Example: 25
MMC.52 Subject scheme version number

A number which identifies a version or edition of the subject scheme specified in the associated <MainSubjectSchemeIdentifier> element. Optional and non-repeating.

Format Free form. Suggested maximum length 10 characters
Reference name <SubjectSchemeVersion>
Example 2.1

MMC.53 Subject code

A subject class or category code from the scheme specified in the <MainSubjectSchemeIdentifier> element. Either <SubjectCode> or <SubjectHeadingText> or both must be present in each occurrence of the <MainSubject> composite. Non-repeating.

Format Variable-length, alphanumeric, suggested maximum length 20 characters.
Code list The scheme specified in <MainSubjectSchemeIdentifier>
Reference name <SubjectCode>
Example 623.95

MMC.54 Subject heading text

The text of a heading taken from the scheme specified in the <MainSubjectSchemeIdentifier> element; or the text equivalent to the <SubjectCode> value, if both code and text are sent. Either <SubjectCode> or <SubjectHeadingText> or both must be present in each occurrence of the <MainSubject> composite. Non-repeating.

Format Variable-length text, suggested maximum length 100 characters.
Reference name <SubjectHeadingText>
Example Labor and industrial relations

End of main subject composite

Additional subject composite

An optional and repeatable group of data elements which together describe a subject classification or subject heading which is additional to the BISAC, BIC or other main subject category.

Reference name <Subject>

MMC.55 Subject scheme identifier

An ONIX code which identifies the subject scheme which is used in an occurrence of the <Subject> composite. Mandatory in each occurrence of the composite, and non-repeating.

When the scheme in the code list is annotated “Code”, use the associated <SubjectCode> element to carry the value (if so required, the <SubjectHeadingText> element can be used simultaneously to carry the text equivalent of the code). When the scheme is annotated “Text”, use the <SubjectHeadingText> element to carry the text of the subject heading.

Format Fixed-length, two numeric digits.
Code list ONIX List 27
Reference name <SubjectSchemeIdentifier>
Example 03
MMC.56 Proprietary subject scheme name
A name identifying a proprietary subject scheme when `<SubjectSchemeIdentifier>` is coded “24”. Optional and non-repeating.
Format Variable-length text, suggested maximum length 100 characters.
Reference name `<SubjectSchemeName>`
Example 21

MMC.57 Subject scheme version number
A number which identifies a version or edition of the subject scheme specified in the associated `<SubjectSchemeIdentifier>` element. Optional and non-repeating.
Format Free form. Suggested maximum length 10 characters, for consistency with other version number elements.
Reference name `<SubjectSchemeVersion>`
Example 21

MMC.58 Subject code
A subject class or category code from the scheme specified in the `<SubjectSchemeIdentifier>` element. Either `<SubjectCode>` or `<SubjectHeadingText>` or both must be present in each occurrence of the `<Subject>` composite. Non-repeating.
Format Variable-length, alphanumeric, suggested maximum length 20 characters.
Code list The scheme specified in the associated `<SubjectSchemeIdentifier>` element.
Reference name `<SubjectCode>`
Example 623.95

MMC.59 Subject heading text
The text of a subject heading taken from the scheme specified in the `<SubjectSchemeIdentifier>` element, or of free language keywords if the scheme is specified as “keywords”; or the text equivalent to the `<SubjectCode>` value, if both code and text are sent. Either `<SubjectCode>` or `<SubjectHeadingText>` or both must be present in each occurrence of the `<Subject>` composite. Non-repeating.
Format Variable-length text, suggested maximum length 100 characters.
Reference name `<SubjectHeadingText>`
Example Labor and industrial relations

End of additional subject composite

MMC.60 Audience code
An ONIX code that identifies the broad audience or readership for whom a publication is intended. Optional, and repeatable if the publication is intended for two or more groups.
Format Fixed-length, two numeric digits.
Code list ONIX List 28
Reference name `<AudienceCode>`
Example 04
Other text composite

An optional and repeatable group of data elements that carries descriptive text related to the publication. Used here either for a short annotation or for a longer description.

Reference name <OtherText>

MMC.61 Other text type code

An ONIX code which identifies the type of text which is sent in the <Text> element. Mandatory in each occurrence of the <OtherText> composite, and non-repeating.

Format Fixed-length, two characters (initially allocated as 01, 02 etc)
Code list ONIX List 33 : see separate documentation
Reference name <TextTypeCode>
Example 33

MMC.62 Other text

The text specified in the <TextTypeCode> element. In this context, mandatory in any occurrence of the <OtherText> composite, and non-repeating.

The <Text> element may carry any of the following ONIX attributes: textformat, language, transliteration, textcase.

For consistency with full ONIX messages, XHTML is enabled in this element: see ONIX for Books – Product Information Message – XML Message Specification, Section 7

Format Variable length text
Reference name <Text>
Example

End of other text composite

MMC.63 Publication date

In records describing a monograph chapter-as-work, the actual date of first publication in either paper or electronic form.

In records describing a monograph chapter-as-manifestation: the actual date of publication in the form to which the DOI registration applies.

In either case, optional and non-repeating.

Format Four, six or eight numeric digits (YYYY, YYYYMM, or YYYYMMDD).
Reference name <PublicationDate>
Example 20010315
**Copyright statement composite**

An optional and repeatable group of data elements which together represent a structured copyright statement for the content item.

Reference name: `<CopyrightStatement>`

---

**MMC.64 Copyright year**

The copyright year as it appears in a copyright statement on the content item. Mandatory in each occurrence of the `<CopyrightStatement>` composite, and repeatable if several years are listed.

<table>
<thead>
<tr>
<th>Format</th>
<th>Date as year only (YYYY)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;CopyrightYear&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>2003</td>
</tr>
</tbody>
</table>

---

**Copyright owner composite**

A repeatable group of data elements which together name a copyright owner. At least one occurrence is mandatory in each occurrence of the `<CopyrightStatement>` composite. Each occurrence of the `<CopyrightOwner>` composite must carry a single name (personal or corporate).

(In a full ONIX record, an identifier may also be used.)

Reference name: `<CopyrightOwner>`

---

**MMC.65 Person name**

The name of a person, used here for a personal copyright holder. Non-repeating. One occurrence of either `<PersonName>` or `<CorporateName>`, but not both, must be present in each occurrence of the `<CopyrightStatement>`.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 100 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;PersonName&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>James J. Johnson III</td>
</tr>
</tbody>
</table>

---

**MMC.66 Corporate name**

The name of a corporate body, used here for a corporate copyright holder. Non-repeating.

<table>
<thead>
<tr>
<th>Format</th>
<th>Variable-length text, suggested maximum length 200 characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference name</td>
<td><code>&lt;CorporateName&gt;</code></td>
</tr>
<tr>
<td>Example</td>
<td>Johnson &amp; Johnson Inc</td>
</tr>
</tbody>
</table>

---

**End of copyright owner composite**

---

**End of copyright statement composite**
Related work composite

A group of data elements which together identify a work which has a specified relationship to the monograph chapter which is described in the ONIX metadata package. Optional, and repeatable if the content item is linked to more than one related work. The mandatory content of an occurrence of the `<RelatedWork>` composite is a `<RelationCode>` and a work identifier.

Reference name `<RelatedWork>`

MMC.67 Relation code

An ONIX code which identifies the nature of the relationship between two entities, which may be either works or manifestations of works. Mandatory in each occurrence of the `<RelatedWork>` composite, and non-repeating. In the code lists below, “X” represents the related work that is identified in an occurrence of the composite.

<table>
<thead>
<tr>
<th>Format</th>
<th>Code list (in records describing a monograph chapter-as-work)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Fixed length, two numeric digits</td>
</tr>
<tr>
<td>Code list</td>
<td>80 Includes</td>
</tr>
<tr>
<td></td>
<td>81 Is part of</td>
</tr>
<tr>
<td></td>
<td>82 Is a new version of</td>
</tr>
<tr>
<td></td>
<td>83 Has a new version</td>
</tr>
<tr>
<td></td>
<td>85 Is a different language version of</td>
</tr>
<tr>
<td></td>
<td>86 Is a resource about</td>
</tr>
<tr>
<td></td>
<td>87 Is continued by</td>
</tr>
<tr>
<td></td>
<td>88 Is a continuation of</td>
</tr>
</tbody>
</table>

Reference name `<RelationCode>`

Example `81 Is part of`
Work identifier composite

A group of data elements which together define the identifier of a work in accordance with a specified scheme, and allowing other types of work identifier for a related work to be included without defining additional data elements. One occurrence is mandatory in each instance of the <RelatedWork> composite. Repeatable if the work has more than one identifier of different types.

Reference name <WorkIdentifier>

MMC.68 Work identifier type code

An ONIX code identifying the scheme from which the identifier in the <IDValue> element is taken. Mandatory in each occurrence of the <WorkIdentifier> composite, and non-repeating.

Format Fixed-length, 2 numeric digits

Code list
01 Proprietary, eg a publisher’s work identifier
06 DOI
11 ISTC

Reference name <WorkIDType>

Example 06 DOI

MMC.69 Identifier value

An identifier of the type specified in the <WorkIDType> element. Mandatory in each occurrence of the <WorkIdentifier> composite, and non-repeating.

Format According to the identifier type specified in <WorkIDType>

Reference name <IDValue>

Example 12345678

End of work identifier composite

End of related work composite
Related product composite

A group of data elements which together identify a product (or “manifestation”) which has a specified relationship to the monograph chapter which is described in the ONIX metadata package. Optional, and repeatable if the content item is linked to more than one related product. The minimum required content of an occurrence of the `<RelatedProduct>` composite is a `<RelationCode>` and a product identifier.

Reference name <RelatedProduct>

MMC.70 Relation code

An ONIX code which identifies the nature of the relationship between two entities, which may be either works or manifestations of works. Mandatory in each occurrence of the `<RelatedProduct>` composite, and non-repeating. In the code lists below, “Y” represents the related product or manifestation that is identified in an occurrence of the composite.

<table>
<thead>
<tr>
<th>Format</th>
<th>Code list (in records describing a monograph chapter-as-work)</th>
<th>Code list (in records describing a monograph chapter-as-manifestation)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Format</td>
<td>Fixed length, two numeric digits</td>
<td></td>
</tr>
<tr>
<td>Code list (in records describing a monograph chapter-as-work)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>80</td>
<td>Includes</td>
<td>Includes the work manifested in Y</td>
</tr>
<tr>
<td>81</td>
<td>Is part of</td>
<td>Is part of the work manifested in Y</td>
</tr>
<tr>
<td>82</td>
<td>Is a new version of</td>
<td>Is a new version of the work manifested in Y, with different content</td>
</tr>
<tr>
<td>83</td>
<td>Has a new version</td>
<td>Has a new version manifested in Y, with different content</td>
</tr>
<tr>
<td>85</td>
<td>Is a different language version of</td>
<td></td>
</tr>
<tr>
<td>86</td>
<td>Is a resource about</td>
<td></td>
</tr>
<tr>
<td>87</td>
<td>Is continued by</td>
<td></td>
</tr>
<tr>
<td>88</td>
<td>Is a continuation of</td>
<td></td>
</tr>
<tr>
<td>89</td>
<td>Is manifested in</td>
<td></td>
</tr>
<tr>
<td>Code list (in records describing a monograph chapter-as-manifestation)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>80</td>
<td>Includes</td>
<td></td>
</tr>
<tr>
<td>81</td>
<td>Is part of</td>
<td></td>
</tr>
<tr>
<td>82</td>
<td>Is a new version of</td>
<td>Is a manifestation of a new version of the work manifested in Y, with different content</td>
</tr>
<tr>
<td>83</td>
<td>Has a new version</td>
<td>Is a manifestation of a work that has a new version manifested in Y, with different content</td>
</tr>
<tr>
<td>84</td>
<td>Is a different form of</td>
<td></td>
</tr>
<tr>
<td>85</td>
<td>Is a different language version of</td>
<td></td>
</tr>
<tr>
<td>86</td>
<td>Is a resource about</td>
<td></td>
</tr>
<tr>
<td>87</td>
<td>Is continued by</td>
<td></td>
</tr>
<tr>
<td>88</td>
<td>Is a continuation of</td>
<td></td>
</tr>
</tbody>
</table>

Reference name `<RelationCode>`

Example

82 Is a new version of
Product identifier composite

A repeatable group of data elements which together define the identifier of a product in accordance with a specified scheme, and allowing other types of product identifier for a related product to be included without defining additional data elements. Mandatory in each occurrence of the <RelatedProduct> composite. Repeatable only if two different identifiers (e.g. DOI and ISBN) for the same related item are sent.

Reference name  <ProductIdentifier>

MMC.71 Product identifier type code

An ONIX code identifying the scheme from which the identifier in the <IDValue> element is taken. Mandatory in each occurrence of the <ProductIdentifier> composite, and non-repeating.

Format  Fixed-length, 2 numeric digits
Code list  
01 Proprietary, a publisher’s product number
02 ISBN-10 (sent unhyphenated in ONIX records)
03 EAN-13
06 DOI
10 SICI
15 ISBN-13 (unhyphenated)

Reference name  <ProductIDType>
Example  02 ISBN-10

MMC.72 Identifier value

An identifier of the type specified in the <ProductIDType> element. Mandatory in each occurrence of the <ProductIdentifier> composite, and non-repeating.

Format  According to the identifier type specified in <ProductIDType>
Reference name  <IDValue>
Example  12345678

End of product identifier composite
End of related product composite
End of content item composite
End of <DOI:MonographChapterWork> record
End of <DOI:MonographChapterVersion> record
Example of an ONIX DOI Monograph Chapter Registration Message

This example shows only elements that might be included in a registration package sent by a publisher, i.e. it does not carry DOI-related elements that the registration agency itself might generate. The message carries a single <DOI:MonographChapterWork> record.

Note that a valid DOI Metadata message must include a namespace declaration on the top-level element with the following URI: http://www.editeur.org/onix/DOI_Metadata/2.0. The example below shows the namespace declaration in the first line. For further technical information on the purpose and use of namespaces see the W3C Recommendation ‘Namespaces in XML’ (http://www.w3.org/TR/REC-xml-names/).

<ONIX:DOI:MonographChapterWorkRegistrationMessage xmlns="http://www.editeur.org/onix/DOI_Metadata/2.0">
  <Header>
    <FromCompany>Sender organization</FromCompany>
    <FromPerson>Sender Name</FromPerson>
